# Hello World

Posted by tomatoe - 2007/06/01 02:42

---

I'm new to AutoCAD2007 and currently taking a crash course from

<http://www.we-r-here.com/cad/tutorials/>

With any luck I'll be able to create / modify drawings soon in the oil industry such as the following:

[http://www.michaeldetomaso.com/jobs.2007/images/dwg-2\\_1532x1140-150.jpg](http://www.michaeldetomaso.com/jobs.2007/images/dwg-2_1532x1140-150.jpg)

I did work for Fluor many moons, prior almost before the event horizon of AutoCAD type programs, etc.

Never the less, a new-B @ any rate. So as I say, 1 click @ a time.

If you have any input for a ole school type guy to come up to speed more quickly please say hello and let me know.

What I'm looking for specifically today would be oil/gas type information on how to quicky draft the element shown from the above link.

That any thing that might help get me back in the saddle again as fast as possible.

=====
