
AutoCad Job

Posted by sam1 - 2007/06/29 20:02

I have learned AutoCad long back, got some short course about 2D and 3D but later on I forgot, recently I am planning to go back autocad, wanna get some course and wanna take this profession as a Cad drafter. I need honest advice from you guys, which would be good for me, I am serious now. What kind of course should I take to be a Cad drafter and also want to know the Job market ?

The best thing to do would be to take classes at a tech school. Enroll in a program that has drafting classes, math, english, materials, etc. Most tech schools have a 2 year degree program in drafting and teach on Autocad. As soon as you finish the program, take the ADDA certified drafter examination. This will give you an advantage in landing a job over anyone that does not have a certification.

AS A FELLOW DRAFTER I BELIEVE THAT IF YOU HAVEN'T LEARNED AUTOCAD IN HIGH SCHOOL THEN ITT TECH IS THE BEST PLACE FOR A GREAT OPPERTUNITY TO LEARN CAD AND SOME OTHER CAD RELATED COURSES. THE CLASS ARE HANDS ON AND THE MATERIAL IS TAUGHT SO WELL THAT AFTER YOUR SECOND SEMESTER OR SO YOU SHOULD HAVE AQUIRED THE SKILLS TO POSES A TYPICAL CAD JOB. TAKE A LOOK AT MY ATTACHED RESUME TO GET A SCOPE OF THE ITT COURSES I'VE LEARNED.GOOD LUCK
