

## **Print Reading for Architecture and Construction Technology, Second Edition**

**ISBN 1-4018-5167-3**

**Authors: David A. Madsen and Alan Jeffers**

**Published by: Cengage Learning Inc.**

A practical comprehensive workbook that is easy to use and understand.

Provides a practical approach to reading prints as related to current common practices.

A necessary foundation of print reading training is the emphasis on standardization and quality architectural and construction print examples.

Chapters contain realistic examples, actual prints, illustrations, related tests, and print reading problems based on actual architectural prints.

The examples demonstrate recommended presentation with actual architectural prints used for reinforcement.

This workbook explains how to read actual industry prints and interpret code requirements in a knowledge-building format with concepts and skills allowing students to read complete sets of working drawings in residential and light-commercial architecture.

The prints are presented as designs in a manner that is consistent with actual architectural office practices. This print reading workbook is written and presented with current computer-aided design and drafting (CADD) technology standards.

This is an advantage as students proceed into a construction career in the 21st century.

All of the print reading examples and problems are prepared using CADD in a manner that displays the highest standards and practices.
